AIA CES Course Overview
Principles of Video Wall Display Technology

**AIA Course No:** PLANAR7364A
LU Credits: 1 LU
Sponsor: Planar
AIA CES Provider No: 40107362

Course Description:

Principles of Video Wall Display Technology provides a primer on video wall technology and offers key considerations for specifying a video wall. It begins with the origins of video walls and reviews various modular video display technologies. It outlines 16 technical specifications and offers four categories of questions to ask before choosing a video wall solution. The course then profiles a set of video wall applications and case studies. It concludes with a summary of industry trends followed by key considerations for assembling a complete solution. Upon course completion, participants should feel prepared to assemble the necessary components to specify a video wall into their project.

Learning Objectives:

Attendees will be able to:
1) Describe the function of the components of a video wall system
2) List and describe ten technical specifications of a video wall
3) Recall key design considerations for video walls
4) Describe three new trends or innovative uses of video walls
