Troubleshooting

If you are experiencing trouble with the LCD display, refer to the follows. If the problem persists, please contact your local dealer or our service center.

Problem: No image appears on screen.
- Check that all the I/O and power connectors are correctly and well connected as described in the “Installation” section.
- Make sure the pins of the connectors are not crooked or broken.

Problem: Partial image or incorrectly displayed the image.
- Check to see if the resolution of your computer is higher than that of the LCD display.
- Reconfigure the resolution of your computer to make it less than or equal to 1280 x 1024.

Problem: Image has vertical flickering line bars.
- Use “Frequency” to make an adjustment.
- Check and reconfigure the display mode of the vertical refresh rate of your graphic card to make it compatible with the LCD display.

Problem: Image is unstable and flickering
- Use “Tracking” to make an adjustment.

Problem: Image is scrolling
- Check and make sure the VGA signal cable (or adapter) is well connected.
- Check and reconfigure the display mode of the vertical refresh rate of your graphic card to make it compatible with the LCD display.

Problem: Vague image (characters and graphics)
- Use “Frequency” to make an adjustment. If this problem still exists, use “Tracking” to make an adjustment.
Warning Signal

Sometimes you probably will see the warning messages from this LCD screen. This means that the LCD display cannot exactly receive the signal from the computer graphic card.

There are three kind of situations may happen. Please check with the connected cables or contact your local dealer for more information.

- **No Signal**
  This message means that the LCD display has been powered on but it cannot receive any signal from the computer graphic card. Check all the power switches, power cables, and VGA signal cable.

- **Going to Sleep**
  This message means that the LCD display is under the power saving mode. In addition, the LCD display will go to this sleeping mode when experiencing a sudden signal disconnecting problem.

- **Unsupport Mode**
  This message means that the signal of the computer graphic card is not compatible with the LCD display. When the signal is not included in the compatibility mode we have listed in the Appendices of this manual, the LCD display will appear this message.
