The monitor can be secured to your desk or any other fixed object with Kensington lock security products. The kensington lock is not included.
◆ VESA Mount your monitor

This monitor conforms to the VESA Flat Panel Mounting Physical Mounting Interface Standard which defines a physical mounting interface for flat panel monitors, and corresponding standards for flat panel monitor mounting devices, such as wall and table arms. The VESA mounting interface is located on the back of your monitor.

To mount the monitor on a swing arm or other mounting fixture, follow the instruction included with the mounting fixture to be used.

⚠️ Note!

*Please select the proper screws!*

*The distance between the back cover surface and the bottom of the screw hole is 8mm. Please use a M4 screw.*
Start your Installation

◆ Remove the Back Cover

Please follow these instructions to remove the cover on the back panel of the LCD so that you can connect the cables in "Connector Ports B."

1. To remove the back cover, follow the arrows in Figure A and press with both your thumbs. The cover should be removed by pressing firmly.

2. Follow the instruction on P.12 (Figure 11.1) to connect the cables in "Connector Ports B."

3. Fix the cover back to the LCD. You may also keep the cables in order with the included cable organizer.

⚠️ Note!
You can place the LCD flat horizontally to make it easier to connect the cables. Please make sure that you place it on an even surface lest the LCD should be damaged by scratches or collision.
Connecting the Display (Figure 11.1, 11.2)

Figure 11.2 needs to be added for the USB port connection.

To setup this display, please refer to the following figure and procedures.

1. Be sure the computer and monitor are turned off.
2. Connect the DC power cord to the power connector; plug one end of the AC power cord into the power adapter, and then the other end into an electrical outlet (11.1).
3. Connect the VGA signal cable from the display’s VGA input connector to the 15-pin connector of your host computer and tighten the screws (11.1).
4. Connect the Audio-In cable from the audio input port of your display to the Audio-out port of your computer (11.1).
5. For the PT1500M and the PT1501M, connect the RS-232 cable from the RS-232 port of your display to the RS-232 port of your computer (11.1).
6. For the PT1500MU and the PT1501MU, connect the USB cable from the USB port of your display to the USB port of your computer (11.2).

⚠️ Notice!

To ensure the LCD display works well with your computer, please configure the display mode of your graphic card to make it less than or equal to 1024 x 768 resolution and make sure the timing of the display mode is compatible with the LCD display.

We have listed the “Video Modes” of this LCD display in the appendix for your reference.

Troubleshooting

If you are experiencing trouble with the LCD display, refer to the following. If the problem persists, please contact your local dealer or our service center.

Problem: No image appears on screen.

- Check that all the I/O and power connectors are correctly and well connected as described in the “Installation” section.

- Make sure the pins of the connectors are not crooked or broken.

Problem: Partial image or incorrectly displayed the image.

- Check to see if the resolution of your computer is higher than that of the LCD display.

- Reconfigure the resolution of your computer to make it less than or equal to 1024 x 768.

Problem: Image has flickering vertical line bars.

- Use “Clock” to make an adjustment.

- Check and reconfigure the display mode of the vertical refresh rate of your graphic card to make it compatible with the LCD display.

Problem: Image is unstable and flickering

- Use “Phase” to make an adjustment.

Problem: Image is scrolling

- Check and make sure the VGA signal cable (or adapter) is well connected.

- Check and reconfigure the display mode of the vertical refresh rate of your graphic card to make it compatible with the LCD display.

Problem: Vague image (characters and graphics)

- Use “Clock” to make an adjustment. If this problem still exists, use “Phase” to make an adjustment.
Warning Signal

If you see warning messages on your LCD screen, this means that the LCD display cannot receive a clean signal from the computer graphics card.

There may be two sources for this problem. Please check the cable connections or contact Planar for more information.

- **No Signal**

  This message means that the LCD display has been powered on but it cannot receive any signal from the computer graphic card. Check all the power switches, power cables, and VGA signal cable.

- **Out of Range**

  This message means that the signal of the computer graphic card is not compatible with the LCD display. When the signal is not included in the “Video Modes” list we have listed in the Appendices of this manual, the LCD display will display this message.
