Warranty and Service Plans

Planar warranty and service plans will help you maximize your investment by providing great support, display uptime, and performance optimization. From post-sale technical support to a full suite of depot services, our services are performed by trained Planar employees. When you purchase a Planar product, you get more than a display, you get the service and support you need to maximize your investment. To find the latest warranty and service information regarding your Planar product, please visit: http://www.planarcontrolroom.com/support

Warranty Features

- 3-year protection from defects in material and workmanship
- Advanced shipment of replacement part or product
- Access to 24/7 emergency phone support
- Please visit: http://www.planar.com/support/warranty/standard_warranties/ for a full warranty review.

RoHS Compliance Statement

All Planar PS5580 displays are fully RoHS compliant.

ADA Compliance Statement

All Planar PS5580 displays are compliant with the Americans with Disabilities Act.

Note: The RS232 command set and Ethernet command set are described in a separate document: PS5580 RS232 and LAN Command Protocol.pdf

Document number: 020-1255-00C

Introduction

This manual describes how to use the PS5580 and gives notes on its use. Please read the manual carefully before using this display.

If you have any questions or problems, please contact Planar technical support:

- [http://www.planarcontrolroom.com/support](http://www.planarcontrolroom.com/support)
- +1-503-748-5799
Safety Information

This display was designed with safety in mind. If you don’t heed the safety warnings and cautions, you could get hurt. The safety warnings are on stickers in various places in and on the display.

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use any of the Planar PS5580 products near water.
6. Do not install near any heat sources such as radiators, heat registers, stoves or other apparatus (including amplifiers) that produce heat.
7. Do not defeat the safety purpose of the polarized or grounding type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong is provided for your safety. When the provided plug does not fit into your outlet, consult an electrician for the replacement of the obsolete outlet.
8. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles and the point where they exit from any of the Planar PS5580 products.
9. Only use the attachments/accessories specified by the manufacturer.
10. Unplug all Planar PS5580 products during lightning storms or when unused for long periods of time.
11. You must follow all National Electrical Code regulations. In addition, be aware of local codes and ordinances when installing your system.
12. Refer all servicing to qualified service personnel. Servicing is required when any of the Planar PS5580 displays have been damaged in any way, such as the AC power cord or plug is damaged, liquid has been spilled or objects have fallen into the display, or if the displays have been exposed to rain or moisture, do not operate normally or have been dropped.
13. Keep the packing material in case the equipment should ever need to be shipped.
14 Wall mounts must be secure. The wall must be strong enough to hold all displays, mounts, brackets and cables.

15 Slight pressure on the LCD will cause distortion of the image. Heavier pressure will cause permanent damage. Planar PS5580 configurations should be mounted in a way that viewers cannot insert small objects in the openings that will create hazards by contacting bare conductive parts.
Environmental Conditions for Installation

- Since the PS5580 panel is very sensitive to physical impact, installation requires considerable caution.
- Minimum clearance (20 mm) must be observed—top, bottom, and both sides—for proper ventilation. Installation must avoid air-tight or nearly air-tight places. Improper ventilation causes malfunction and shortens product life by a rapid internal temperature rise. If the PS5580 must be installed with improper ventilation, additional ventilation openings or fans must be provided to keep the internal temperature between 0°-35°C (32°-95°F).
- For grounding the PS5580 and attached devices, it should be connected as a frame ground.
- Considering the PS5580 max power consumption, check the main electrical specification.
- Regularly clean the vent holes in the back of the PS5580 to prevent overheating.

Recommended Operating Conditions

- Temperature: 5-35°C (41-95°F)
- Humidity 35-75%
- Do not install the set in an air-tight condition; provide adequate ventilation.
- Do not install the set in a place of direct sunlight or excessive exposure to lights.

**WARNING** Blackening, stains or burning effect on the screen may occur through improper installation or use outside these recommended conditions.

 welded to electrical and electronic equipment (WEEE) and electronic waste (E-Waste) as classified under the Waste Electrical and Electronic Equipment (WEEE) Regulations 2013 and the Waste Electrical and Electronic Equipment (Amendment) Regulations 2016.

The symbol is valid only in the European Union. If you wish to discard this product, please contact your local authorities or retailer for the correct method of disposal.

This symbol is valid only in the European Union. If you wish to discard this product, please contact your local authorities or retailer for the correct method of disposal.

European Disposal Information

The symbol shown on this product or its packaging indicates that this product should not be treated as household waste. Instead it should be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate disposal of this product. The recycling of materials will help to conserve natural resources.

Burn-In Versus Temporary Image Retention

Burn-in causes the screen to retain an image essentially forever, with little or no way to correct the problem. Under normal use, an LCD module will not experience burn-in, as plasma displays do, nor will it retain images in any way.

Normal use of an LCD module is defined as displaying continuously changing video patterns or images. However, LCD modules can experience temporary image retention when recommended usage guidelines are not followed.

What is Temporary Image Retention?

Temporary image retention (TIR) can occur when a static image is displayed continuously for extended periods of time. An electrical charge differential may build up between the electrodes of the liquid crystal, which causes a negative-color video image (color-inverted and brightness-inverted version of the previous image) to be retained when a new image is displayed. This behavior is true for any LCD device from any LCD manufacturer.

TIR is not covered under warranty. See standard warranty terms and conditions for details. Here are some guidelines to help you avoid TIR:

- Use the LCD module to show a screen saver, moving images or still pictures that change regularly. When using high-contrast images, reposition the images frequently.
- Turn off the PS5580 when it is not in use.

Normal Use Thermal Guidelines

Normal use of the LCD module and power supply module are defined as operating in the open air to prevent heat buildup, and without direct or indirect heat sources such as lighting fixtures, heating ducts, or direct sunlight that can cause the modules to experience high operating temperatures. For all modules, do not block fans or ventilation openings. If the LCD module will be installed in a recessed area with an LCD surround or enclosure, ensure adequate openings are applied for proper air flow and ventilation.

At 2000 meters altitude or below, the maximum ambient operating temperature for the LCD module cannot be above 104º F (40º C) nor below the minimum ambient operating temperature of (32º F) 0º C. If one of these conditions exists, it is up to the installer to ensure that module placement is changed, thermal shielding is provided and/or additional ventilation is provided to keep the display within its nominal operating parameters.
Handling the Display

- The PS5580 can be damaged even with only minor impact. Shock or impact on the sides or corners can result in internal circuit damage.
- The edges and bottom of the panel are fragile. Use shock-absorbing pads or rugs for laying the display down.
- Always use two persons to carry or install the PS5580.
- Carry the PS5580 with it straight up and down, not flat like a tray.

Carry the PS5580 in an upright position. Try not to touch the screen; you will only have to clean it later.

Do not carry the display flat. Its weight can bend and damage it.

When two persons lift the panel, it can become twisted. Coordinate the lifting so this doesn’t happen.
Unpacking and Checking Display Accessories

</table>
Installing PS5580 Displays on VESA Mounts

**Note:** If you plan to use the Planar Mounting System for these displays, skip this whole section and see the manual Planar PS5580 Planar Mounting System.

1. Connect all cables to the panel and hang it in the *lower left corner* of the wall. Be sure the panel is *level*.

2. Connect all cables for another display panel, and hang this panel. Hang this to the right of the first panel.

3. Where the corners meet along the bottom edge, slip an alignment guide over the corner hardware on the back of the panels. The alignment guide should not protrude beyond the exposed edges of the panels.

4. Check that both displays are level and straight.

5. Tighten the screws for this alignment guide, compressing the nylon spaces until the guide is held in place.

6. Where the corners meet along the top edge, slip an alignment guide over the corner hardware on the back of the panels. The alignment guide should not protrude beyond the exposed edges of the panels.

**Note:** If there are multiple rows, the alignment guide should protrude beyond the edges of the panels. However, if this is a one-row installation, they should not protrude.

7. Tighten all the screws for this alignment guide, compressing the nylon washer.

8. Repeat steps 2-7 until the first row is complete.

**Intermediate Rows**

1. Attach all cables and hang the leftmost panel in this second row. The corner hardware should mate with the protruding hardware from the row below.

2. Tighten the lower right corner screw so it holds the alignment guide.

3. Where the corners meet along the left edge, slip an alignment guide over the corner hardware on the back of the panels. This guide should not protrude. Tighten the screws for this guide.

4. Attach cables for the next panel and hang it as the next panel to the right in this row. Be sure the corner hardware mates with the protruding hardware next to it, and that everything is level and straight.
5 Where the corners meet along the top edge, slip an alignment guide over the corner hardware on the back. This guide should protrude.

6 Tighten the screws for this guide.

7 Repeat the steps 1-6 above until all rows except the top row are mounted.

**Last (Top) Row**

Do the steps for "Intermediate Rows" above, except the alignment guides along the top should *not* protrude.

**Removing a panel**

1 To remove a panel, all panels above and to the right of the panel you need must be removed, starting with the panel in the upper right corner of the wall.

2 For each panel that you remove:
   a Slightly loosen all the corner screws that are accessible.
   b Remove any alignment guides that are only connected to one other panel.
   c Lift the panel to disengage it from the alignment brackets below and remove it from the wall.

3 To rebuild the wall, reverse the steps taken for each panel, backtracking until the panel in the upper right corner is in place.

Connecting For Remote Control

Connecting RS232 Cable and IR Receiver

The maximum for RS232 with daisy chain connection is 30 sets. If you need additional connection, use an RS232 distributor.

The IR command for power on/off is looped through all the displays. All other commands from the IR remote are not looped through, and the IR Receiver cable must be connected to the specific unit you want to control.
The control PC should be connected to one of the PS5580s with Ethernet cable. For connection between PS5580s, use RS232 cables.
Operation

How to use the Remote Control

1  MENU button
   • Press MENU button to display the MENU.
   • Press again to move from submenu to main menu.

2  Direction buttons and OK button
   • ➜ select the highlighted item or move from one menu to another horizontally.
   • ▼▲ buttons move the highlighted area up or down to select adjustment items within the menu.

3  EXIT button
   • Press EXIT button to exit from the MENU

4  INFO button
   • This displays, in the upper left corner of the screen, the display information at the moment. (The illustration here is one example.)

Color Balancing the Wall

If you have only one display, you do not need to go through this section. If you have a wall of displays, you will want them to display the same colors throughout the wall.

Color Temperature

Different “pure white” light sources do not always have the same color. For instance, light from an incandescent bulb has more yellow than light from direct sunlight. “Color Temperature” is a way of measuring these color differences. In general, higher color temperature numbers are bluer or “cooler.”

To adjust Color Temperature,

1. Reset all the displays to a nominal value. For each display in the wall, do the following:
   a. Press the MENU button to display the menu on the screen.
   b. Select PICTURE and press OK.
   c. Select BACKLIGHT and press OK. Adjust Backlight to 80.
   d. Select COLOR BALANCE and set
      • all three GAINS to 50
      • all three RGB GAINS to 100
      • all three RGB OFFSETS to 50
   e. Select COLOR TEMPERATURE and set it to USER.

2. Using either a meter or your eye, find the dimmest unit. You must adjust all the other displays in the wall to match this one.

3. Adjust the backlight levels of all the other displays to match as closely as possible to this dimmest display.

4. Use the RGB GAIN of each display to make the colors match.
   a. Choose one of the displays that looks “ whitest” and match the others to this one. Always match a display to one that is next to it (left-or-right or above-or-below).

5. Display a 50% gray screen by lowering the backlight values, and adjust the RGB OFFSETS so they match.

6. Match the brightness again with the backlight controls.
## Supported Input Signal Resolution

DTV signals (EDTV, HDTV) are not supported in PC Input.

Regulatory Information

Manufacturer's Name: Planar Systems, Inc.
Manufacturer's Address: 1195 NW Compton Drive
Beaverton, OR 97006
Declares that the product Model Numbers: PS5580

Conforms with the provisions of:

EN55022:2010 Radiated and Conducted Emissions from IT Equipment

EN55024:1998 Immunity of IT Equipment
Including:
- EN61000-4-2 Electrostatic Discharge
- EN61000-4-3 Radiated Immunity
- EN61000-4-4 Electrical Fast Transients
- EN61000-4-5 Line Surge
- EN61000-4-6 RF Conducted Susceptibility
- EN61000-4-8 Magnetic Field Immunity
- EN61000-4-11 Voltage Dips and Interrupts

And:
- EN61000-3-2 Harmonic Current Emissions
- EN61000-3-3 Voltage fluctuations and Flicker

EN60950:2006+A11 Safety of IT Equipment

The Technical Construction File required by this Directive is maintained at the corporate headquarters of Planar Systems, Inc., 1195 NW Compton Drive, Beaverton, OR 97006.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Industry Canada (ICES-003): This Class A digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.
Any changes or modifications to the display not expressly approved by Planar could void the user's authority to operate this equipment.

Customer Support Information

24/7 Online Technical Support is available at http://www.planar.com/support

Customer Support Contact Information and Hours of Operation

Tel: 1-866-PLANAR1 (866-752-6271) or +1 503-748-1100
Hours: M-F, 8am - 8pm Eastern Time | M-F, 5am - 5pm Pacific Time

Warranty and Service Plans

Planar warranty and service plans will help you maximize your investment by providing great support, display uptime, and performance optimization. From post-sale technical support to a full suite of depot services, our services are performed by trained Planar employees. When you purchase a Planar product, you get more than a display, you get the service and support you need to maximize your investment. To find the latest warranty and service information regarding your Planar product, please visit: http://www.planar.com/support/warranty/standard_warranties/

Warranty Features

- 3-year protection from defects in material and workmanship
- Advanced shipment of replacement part or product
- Access to 24x7 emergency phone support
- Please visit: http://www.planar.com/support/warranty/standard_warranties/ for a full warranty review
